Company's logo

Description of company's activities

At the start of business the company is involved in the manufacture of sawn timber and oak elements. Product quality is allowed to conquer new markets and continuous increase in production and the number of workers. With the introduction of modern equipment processing capacity has increased 3-4 times in comparison. Experienced workers with computer control and quality statistics, timely noticed any shortcomings. Modern kilns enables quality processing of wood drying. It is produced per customer specification.

In addition to investments in new machinery and tools, significant funds were invested in new, modern facilities. New office building was built in 2000. Hardwood occupies 17,500 m² of space and a very modern house designed to work in the timber industry. Closed around 3000 m² of space.

Successful placement on selective foreign market is sufficient proof of the quality of products the company "Delfin-Trgotrans".

Description of company's activities

TTO Thermotechnik d.o.o. has been one of Europe's leading names in the OEM production of heating system manifolds and related components for hot-water heating systems for 25 years. As a family business specialized in the development of new products, technologies and services, Thermotechnik is creating new trends in heating technology. It has introduced a series of innovative products in the field of panel heating. The most common products are the stainless steel manifolds, but also manufacture cabinets, counter tops, service water stations, regulation sets and compact stations.

Description of company's activities

We work on the preparation of project proposals and supporting documentation that are fully coherent with the EU funding programmes' requirements. Also, we take part in the administrative coordination of EU funded projects, and offer our expertise in project management, public procurement and marketing.

We offer services in the following thematic areas: RES investments, energy efficiency, tourism, production, rural development, education, etc., specializing in strategic, organizational and financial management in both private and public sector. We aim to offer high quality service to all our clients, while developing professional but at the same time warm relations with mutual trust and satisfaction.

Our business solutions include development and implementation of business plans, creation of investment programmes, assessment of the value of enterprises, improvement of business processes and operations, as well as implementation of organizational changes. This integrated approach allows us to quickly and effectively increase the value of our client companies.

Our wide spectrum of services also includes accounting, providing financial and accounting expertise in courts, and organizing tailor made seminars and trainings on EU funding.

Description of company's activities

SEA Servizi Energia Ambiente S.r.l. founded in 2005 in the city of L'Aquila is accredited as an E.S.Co. (Energy Services Company) according to the ISO 11352 and as an engineering company, with a staff made up by experts in various sectors such as energy, information technology, company organization, environmental engineering and corporate training that make available their know-how with the aim of contributing to a sustainable growth of territory and resources involved. SEA aims to be the reference point for all problems linked to the consumption of energy, serving as a point of reference to industry, government and private sector.

ENERGY SAVINGS AND PRODUCTION We are able to design plants for alternative energy, doing advanced analysis energetic studies, for buildings and industries, reaching solutions to raise down consumption and the loss of energy

ESCo SERVICES We find solution for energy saving, we look for an investment plan starting from the energy consumption to the solution for buildings, hospitals, hotels or industrial plants, with EPC or E.S.Co Contracts

ENERGY SAVINGS FOR BUILDINGS We offer investments to improve energy efficiency, starting from energy audits and implementing solutions for energy saving. in residential we make solutions that improve the comfort and consumption savings of building, ensuring the maintenance and proper operation of the heating system..

WHITE CERTIFICATES SEA participates in the Italian white certificates market, trading in the stock market of electricity the so-called TEE. The Energy Efficiency Certificates have a greater incentive to support works that achieve energy efficiency

RESEARCH SEA has an own research project to produce energy from heat recovery for very small size power and low temperature.

Description of company's activities

Since 2005 our business is mostly related to Research and Development solutions for alternative energy. We install photovoltaic systems of any power rating and size and wind generators. Moreover we develop applications tied to hydrogen technologies. Since 2011 we commercialize LED lights. In particular we produce LED bars and develop custom applications according to our customers needs. With regard to the above applications, products and fixtures have been developed like lamp-stands, for lighting private premises, with LED lights charged by photovoltaic panels, control units and battery charging and switching supply units. With regard to hydrogen-related products, regulators have been developed able to supply and control the power voltages and currents of a fuel cell and a battery charger powered by means of an electrolytic cell. Hydroponics greenhouses is the new field we developed since 2013. We developed our greenhouse illuminated by dedicated LED grow lights and we're currently in laboratory test stage.

Description of company's activities

Since 1993 Electrex designs, produces and commercializes, in Italy and abroad, instruments and software for energy measurement, energy saving, energy consumption and production management.

The Electrex solutions are used in the energy efficiency and energy automation applications, for the industrial, tertiary, residential and renewable energy sectors allowing a rapid return on investment.

Electrex, one of the first companies to operate in these sectors, has acquired over the years a considerable experience and competence that few other companies can claim to have. With over 40% of the staff dedicated to R & D, we demonstrate our strong commitment to innovation and continuous improvement in order to anticipate the needs of our customers.

We follow our products from design to after sale service and support, being a flexible and dynamic company. That is why Electrex continues to be chosen more and more from both local and international partners.

All our products are 100% designed, engineered and manufactured in ITALY. Accurate and long lasting.

Description of company's activities

ETA Blades designs, develops and manufactures innovative wind blades made in composite materials with high technology for the next wind farm generation needs. Furthermore ETA supports re-blading programs: enhancing the value of assets (vs lower or no incentives) while improving wind farm efficiency (vs market saturation) at a lower environmental impact (vs. deteriorated social acceptance).

Description of company's activities

EnerLAB is a cooperative society established in Marche (Italy).

EnerLAB has a registered office in Monte San Giusto (MC) and two offices: in Montegrano (FM) and in Fermo.

It is a center of studies, research and testing for sustainable construction.

EnerLAB, thanks to the provision of tools for investigation and diagnosis and software simulation and calculation, offers the following services:

- Research, development, testing of materials for the building envelope aimed at improving energy efficiency and home comfort
- Running tests in the laboratory and work on parts or entire structures in order to detect anomalies, discontinuities and defects
- Analysis and characterization of acoustic energy and building components • Investigation and diagnosis of performance in work with instrumental checks • Control of home comfort and verification of consumption • Diagnosis / acoustic efficiency of the building envelope
- Verification of thermal-acoustic of building components and building envelope • Thermography and heat flow
- Consultations in general construction and energy • Energy measurements and physical and technical applications from design and testing
- Support start-up of the construction site • Consulting on thermal insulation, moisture and mold
- Design of equipment and systems performative envelope-system • Planning for sustainable living

Description of company's activities

Linset&Co is an advanced center of design, prototyping, testing and research for composite materials based. Linset was born in 2001 as R&D center of Azimut-Benetti SpA and became an independent company in 2010. The core business of Linset&Co is to supply research, engineering, development, material testing and technical consultancy, offering a wide range of expertise and a substantial know how obtained in 10 years of activity. Linset is currently involved in various activities and projects in the hi-tech composite materials sector fostering innovation and supplying services to the marine/naval, wind blades, construction industries, mechanical engineering and automotive, as well as to raw material producers. Linset&Co is involved in the design of structural components as well as validation of the assembly phases (e.g. bonding, welding, mechanical connection), finishing techniques analysis and control (cycles coating and protective coatings) and the whole project cycle/production for the selection and optimization of best available technologies. The long experience gained by Linset&Co in the field of production processes, allows to offer a professional service of analysis, assessment and strategic review of the procedures and tools for the Carbon Management in order to manage the carbon emissions of companies (Carbon Footprint of product-CFP calculation and GreenHouse Gases Inventory implementation). Linset acts as a consultant for new products development, analyzing new requirements and providing inputs for innovative solutions in terms of product's design, keeping pace with the needs of sustainable development, industrial competitiveness, and environmental impact. Activities: physical tests; destructive mechanical tests; non-destructive mechanical tests; chemical resistance tests; thermal resistance tests; thermal analysis on composite material (glass, Kevlar and carbon fiber); thermal analysis on wood materials, stone materials, ceramic materials, thermoplastic and thermosetting materials, light metals and alloys, elastomeric materials; ultrasound and thermographic analysis; engineering design and structural FEM calculations; LCA and CFP product and process analysis; creation of 3D models and molds of small/medium/large dimension; realization of prototype series of composite products; cutting and shaping 2D and 3D with 5-axis CNC milling machine; support in drafting and presentation of project on European and Regional calls; legal advice (CTU, CTP).

REGIONE PUGLIA

Description of company's activities

Founded in 1992, the Company provides consulting services for energy efficiency, it plans and realizes electrical, electronic and electromechanical systems. Furthermore, the Company is able to install energy plants from renewable sources. With over twenty years of experience, the EAE quickly offers qualified services always trying to satisfy the customer's needs.

Our services / Planning and realization of installations:

- Electrical and electronic – Electromechanical - Cogeneration and Tri-generation – Biomass – Geothermal – Photovoltaic
 - Photovoltaic storage - Solar thermal - Wind Power
 - Mini and Micro Wind Power - Lighting Low Power - LED Lighting - Products for energy saving - Electrical transformer substations - Sustainable mobility - Electric Vehicles - Air Conditioning - Energy audit and Energy Management to find management interventions, control systems and system solutions more adequate and modern for reducing energy consumption
 - Energy certification of buildings - Consultation and updating of cadastral data - Service specific design for building renovation
- Thanks to the service of energy audit and subsequent implementation of the right system solutions, our customers are satisfied for three reasons:
- Optimization of the production processes to be more competitive in the market
 - Considerable saving allowing the company to make better use of their economic resources
 - Environmental sustainability to reduce the impact of its activities on the environment

Description of company's activities

EProGea was born from the professional experience of Eng. Nicola Demaio, a project manager specialized in consulting, designing, execution and monitoring of engineering projects.

Among our proving results, we may underline the technological plants design, management and supervision about schools, museums, public areas and commercial firms, as some innovative and integrated photovoltaic systems and energy efficiency systems. We are specialized in biogas, photovoltaic systems, wind systems, use of agricultural and alternative energy sources, thermo-technical and electrical systems, renewable energies, fire fighting systems, risk analysis. We offer consultancies to companies in Energy, Environment, Security on workplaces and Energy Efficiency. Every work is carried out according to the Work Health and Safety. Our services of consulting, assistance and designing are structured according to the Project Management International (PMI) procedures.

Description of company's activities

TÈKNE s.r.l. is an engineering company which comes from the idea to integrate skills and experiences gained through 25 years of activities of its founders (technicians specialized in different fields of civil, environmental, mechanical, electrical engineering, geology, agriculture, topography) in an organic structure and multidisciplinary approach that counts today a global staff of 20 persons including engineers, architects and technical specialists - able to manage and work on projects of every kind of difficulty and dimension. In integrated projects we propose ourselves as "general contractors" - by meeting the growing needs of our customer, both in public field and private field, in order to obtain a high quality performance engineering project, design, architecture and construction. The overview of the work is made through the structural overlap of the different views and different aspects of the work. Tèkne offers technical engineering and architecture services in compliance with the strict quality procedures dictated by ISO 9001/UNI EN ISO 9001 2008 certification, issued by "Accredia" with certificate number IT08/0466. Tèkne is always finding the best technologies and innovations in every engineering fields and this allow to take a lead in project works. Since 2007 it has been registered with the OICE, the trade association belonging to Confindustria [Italian employers' federation] that represents Italian engineering, architectural and technical-economic consulting organizations. Our team worked abroad in countries as Switzerland, Morocco and Azerbaijan. Since a long time Tèkne operates in Renewable Energy fields, where we have been project managers, EPC and General Contractors for big renewable energy plants as 270 MW of Eolic plants and 110 MW photovoltaic plants, with several projects of biogas and biomass systems too. Tèkne takes care for all this kind of plans by permitting phase, land choose, building site supervision, and through landscape and environmental permitting including also electrical grid connection and electrical MV/HV substations planning. In accord to the renewables industry and technological innovation and employment in Europe, we've projected systems in many areas. Constant growing needs about photovoltaic and miniwind turbine gets Tekne to satisfy customers requests in areas where there aren't electrical grid connections (as rural areas). We applies renewables energies concept also on different kind of architectural structures like roofs, station roofs or through innovative applications with a special care to environmental impacts.

Description of company's activities

The PRO.Energy Ltd aims to build systems and engineering services related to the production, transportation and use of electricity.

Particular attention is paid to the renewable energy sector, having realized photovoltaic systems with a total capacity of about 20 MW in the last 3 years.

Important activities have been undertaken in the field of small wind turbines and biomass, as well as sustainable mobility. Significant contracts were executed in the civil and industrial plant engineering sector, in companies with high technological content and activities spread throughout the continent. Speaking about industry sector, many are the construction of electrical and technological systems at the service of manufacturing processes, totally made by our company.

Description of company's activities

Encosys s.r.l. is an Italian company founded in 2009, from professional people, with more than 10 years' experience and business achievements, in the environment and sustainable energy branches.

Our industrial mission: design and produce control and energy recovery systems, like our SEM, an energy storage system for elevator that allows to recover the kinetic energy of the cabin during braking phase as well as the potential energy during descending phase, that can be later used during acceleration and rising phases.

The development of new products is a constant company goal and it needs a continuous investment of the R&D department, which is daily involved in research and innovation.

Description of company's activities

The wider use of Decentralized Energy (Electricity production at or near the point of use, irrespective of size, technology or fuel used - both off-grid and on-grid) is a key solution to bringing about the cost-effective modernization and development of the world's electricity systems. Existing decentralized energy (DE) technologies can reduce delivered energy costs and decrease emissions of CO₂ as well as other harmful pollutants. Decentralized Energy includes on-site renewable energy and industrial energy recycling and on-site power and high efficiency cogeneration (CHP). The worldwide development of high efficiency cogeneration delivers substantial economic and environmental benefits. Ali6 srl, company working from 2009 develops innovative products and solutions for energy efficiency and renewable Energy .

ALI6 works in the field of energy efficiency and Decentralized Energy Generation by offering the following products and solutions: • Cogeneration (Combined Heat & Power Unit); • HyREI –Renewable Energy Hybrid Smart Grid Systems • Solar Hybrid Water Pumping and Treatment Set • Renewable Energy (Biogas, Biomasses, Photovoltaic, Aeolian)

Description of company's activities

Tera is a young SME based on the merging experiences of engineers and managers with expertise in different fields, such as energy efficiency for renewable energy, environmental sensors network and target localization in defined areas, industrial development, R&D. Our team is also directly involved in national and European R&D cooperative projects. Tera focuses its activities on the concept of efficiency, as a general and pervasive guideline and not only as a final application (as for energy field), implementing this concept in innovative solutions. TERA's current topics are:

- Photovoltaic Plants Monitoring (ad-hoc Hardware and Software compliant with most inverters) and Environmental real-time monitoring and control;
- Real time Hybrid Engine system solutions (ad-hoc Hardware and Software for diesel-hydraulic-electric system)
- Building Energy profiling and management systems (including renewable sources and storage), decision support system for energy management of houses (for general purpose, "citizens" market);

TERA's expertise is related to the following areas:

- ICT and Embedded Electronics: low-power Short Range Devices (SRD), wireless sensors networks, electronic systems for ad-hoc automotive controls;
- Electronic energy conversion technologies, particularly for Photovoltaic and micro wind systems for the energy supply of small stand alone loads, as for example that of niche markets like broadcast telecommunications or sailing boat;
- Renewable energy plant development, Energy audit of production processes.

Description of company's activities

Divisione Energia s.r.l. is a company specializing in the design and energy planning in the public, industrial, commercial or residential.

In different contexts and in each intervention, the purpose is to rationalize consumption, savings and increase efficiency by promoting the use of best available technologies in the market or developing appropriate contractual arrangements for the provision of energy Services, whether thermal, electrical or mechanical.

Every study or project developed in headquarter work to identify the best solutions based on the Data collected during specific energy audits.

All the suggested applications reflect estimates prepared by specialized companies in the sector thus providing the customer with all the information and calculations necessary to make the most convenient choice in relation to their needs.

Our way of promoting the intelligent use of energy and conscious act in the wake of the fundamental principles of environmental sustainability by pursuing the reduction of consumption of fossil fuels, the reduction of atmospheric emissions of carbon dioxide and the use of renewable energy.

Description of company's activities

Elbi has been producing switchgear and transformer substations since 1992, with continuous innovation process (e.g. measurement and protection devices incorporated into our switchgear). Elbi has been producing composite polymer (silicone rubber) insulators since 1996. We produce tension-suspension, post, apparatus, railway, bushing and other special types of composite insulators, for the medium and high voltage networks up to 400 kV. All products are manufactured from high quality materials (e.g. two-component Liquid Silicone Rubber made by Wacker Germany etc.), with constant quality control. Elbi has a quality management system certified according to ISO 9001:2008.
